Mixtures of 0 to 4 of the different pathogens specified in the panel are to be expected in the respective individual samples:

Selection of

Aeromonas spp., Campylobacter spp., *Clostridium difficile* (toxinogen), Enterohemorrhagic *E. coli* (EHEC / STEC), Enterotoxigenic *E. coli* (ETEC), Enteropathogenic *E. coli* (EPEC), Enteroinvasive *E. coli* (EIEC), Escherichia coli O157, *Salmonella* spp., Shigella spp., Vibrio spp., Yersinia enterocolitica

In order to take into account the usually very different pathogen coverage of commercially available multiplex PCR/NAT concepts, each of the parameters listed above is certified separately as part of the evaluation.

**Only results from multiplex PCR/NAT test systems** with a precisely specified test/kit designation are accepted.

The parallel use of singleplex PCR/NAT detection methods for individual pathogens in the panel is not certified. The relatively broad spectrum of pathogen-specific EQA programmes for bacterial genome detection PCR/NAT is still available for this purpose.
